PROFILE

BCA student focused on software development with hands-on experience building and shipping full-stack web applications. Strong practical foundation across React, FastAPI, PostgreSQL, Python, SQL, Tailwind CSS, Git and Docker, with a flagship project that covers real commerce, authentication and payment workflows.

01 FEATURED PROJECT

NOVA | Full-Stack E-Commerce Platform

React 19 • Vite • FastAPI • PostgreSQL • SQLAlchemy • Tailwind CSS 4 • Docker • Razorpay

- Built a complete multi-page commerce experience with product browsing, product details, saved items, cart, checkout, order confirmation, order history and account flows.
- Implemented guest and authenticated carts with backend persistence, relational order data and product-variant support.
- Developed registration, login, password recovery and reset flows, with database-backed rate limiting across sensitive endpoints.
- Designed API and database layers using FastAPI, SQLAlchemy, PostgreSQL and Alembic migrations for maintainable relational data models.
- Integrated Razorpay test-mode checkout with backend-controlled order creation, payment-event tracking, webhook handling and stock validation.
- Configured Docker Compose with PostgreSQL and Mailpit to make local development and password-recovery testing reproducible.

Repository: github.com/honestlygolu/Nova-Ecommerce

02 HOW I BUILT IT

- **Frontend architecture:** reusable React components, client-side routing, state-driven cart and account experiences, API integration through Axios.
- **Backend architecture:** REST-style FastAPI endpoints, Pydantic validation, JWT-based authentication and SQLAlchemy ORM models.
- **Data integrity:** explicit order and payment records, item/address snapshots for open orders, stock checks and migration-driven schema changes.
- **Developer workflow:** Git-based feature development, GitHub source control and Dockerized local services for consistent setup.

CORE STACK

LANGUAGES

Python
JavaScript
SQL
HTML / CSS

FRONTEND

React
Vite
Tailwind CSS
React Router
Axios

BACKEND

FastAPI
SQLAlchemy
REST APIs

DATA

PostgreSQL
Alembic

TOOLS

Git
GitHub
Docker
Docker Compose

PAYMENTS

Razorpay
Test-mode checkout

EDUCATION

Ganga Institute of
Technology and Management
Bachelor of Computer Applications (BCA)
Expected 2027

BUILDING PRODUCTS, NOT JUST PAGES.

A closer look at the engineering decisions represented by the NOVA project.

FULL STACK React + FastAPI + PostgreSQL	SECURITY Auth + rate limits + reset flows	COMMERCE Cart + orders + payments
--	--	--

03 ENGINEERING CAPABILITIES

FRONTEND ENGINEERING Reusable React UI, route-based pages, client state and responsive Tailwind styling.	API DEVELOPMENT FastAPI endpoints with validation, authentication and clear separation of application concerns.	DATABASE DESIGN SQLAlchemy models and Alembic migrations for users, products, variants, carts, orders and payments.
AUTH & SECURITY JWT authentication, password hashing, reset flows and database-backed rate limiting.	PAYMENT WORKFLOWS Razorpay sandbox checkout, server-side order creation, payment events, webhooks and stock checks.	LOCAL INFRASTRUCTURE Docker Compose services for PostgreSQL and Mailpit, supporting repeatable local testing.

04 SELECTED NOVA FEATURES

Shopping experience	Product discovery, product details, saved items, cart and checkout flows.
Accounts	Registration, login, account management, password recovery and secure reset workflow.
Orders	Order confirmation, history and detail pages backed by relational order records.
Commerce logic	Product variants, stock validation, order item snapshots and payment-event tracking.
Developer environment	Docker Compose, PostgreSQL, Mailpit, Git/GitHub and environment-based configuration.
Deployment direction	Structured frontend/backend separation suitable for independent API and frontend deployment.

05 PROFESSIONAL PROFILE

- **Strongest working style:** learn by building, validate ideas through working software, and improve architecture as product requirements become more realistic.
- **Full-stack cohesion:** comfortable moving across frontend, backend and database layers instead of treating them as separate disciplines.
- **Current career direction:** software development roles where practical full-stack ownership, problem solving and product-oriented engineering are valued.

06 DEVELOPER FOCUS

BUILD Turn ideas into working web products with clear user flows and reusable components.	LEARN Grow through practical projects, debugging, iteration and deeper backend understanding.	OWN Comfortably work across UI, API, database and development environment when a feature requires it.
